2. Citations and explanations (Rule 70.7)

The present invention relates to an instantaneous electronic ballast for a metal halide lamp with a power converter, a current sensor, and a state transition circuit.

Reference is made to the following documents from the international search report.

D1 : JP 4-33297 A

D2 : KR 95-35523 A

D3 : JP 6-76794 A

D1 discloses a turn-on device for a discharge lamp with a state transition circuit which transits the lamp from glow discharge state to arc discharge state.

D2 discloses a lamp lighting control means which can be used for a metal halide lamp.

D3 discloses a lamp starter circuit for a discharge lamp.

Since none of the above documents discloses the specific constitution of the state transition circuit of claim 1 nor 3 and the rest of the claims are dependent on claim 1 or 3, the subject matter of claims 1 through 6 seems to be novel and involves an inventive step. (Article 33(2) and 33(3) PCT)

The industrial applicability of the subject matter of claims 1 through 6 is self-evident. (Article 33(4) PCT)
